

a The source is available at the encoder, but the error table must be computed

b Recorded table construction time

Historical timing: 8 frames $\times$ 3 repetitions at QP32. No new end-to-end latency measurement.

c Calibration changes the cost

Fixed, held-out β

Router uses decoded features.
No per-frame source table is required.

Per-frame source-calibrated β

The plotted budget sweep uses $M[t, k]$.
A fast router does not remove that cost.
